

The Farm Sustainability Assessment (FSA) was created by the Sustainable Agriculture Initiative (SAI) Platform and offers a global food and beverage industry multi-purpose tool to assess and validate on-farm sustainability.

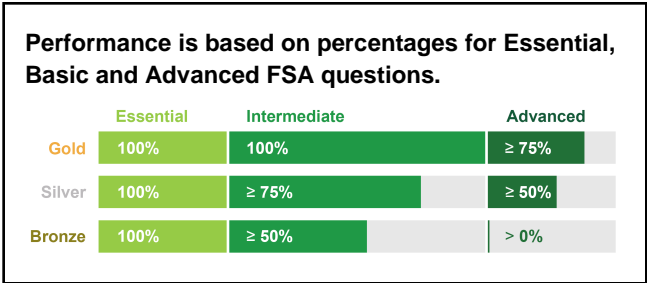

The CASP self-assessment was benchmarked to the FSA 3.0 to support communication about California almond stewardship. The SAI-FSA report scoring is based on responses to the CASP self-assessment questions along with recognition of US federal and California regulatory requirements that align with the FSA 3.0 questions. There are three levels of FSA questions:

- **FSA Essential** questions address legal compliance, social responsibility and foundational principles of environmental stewardship.
- **FSA Intermediate** questions identify additional best practices related to social responsibility and environmental stewardship.
- **FSA Advanced** questions address the most progressive farming practices.

This report shows the overall FSA score based on the percentage of FSA questions by category with corresponding FSA performance levels:

- **Not Yet Bronze**
- **Bronze**
- **Silver**
- **Gold**

A detailed report showing the FSA 3.0 questions and how applicable legislation and the CASP self-assessment are used to evaluate FSA 3.0 is available upon request by emailing CASP@sureharvest.com. For general information about the SAI-FSA program, see <https://saipatform.org/fsa/>.

Year	Location	Performance Level	Essential	Intermediate	Advanced
2023	FIELD 812	🌟 Silver	100.0%	75.6%	56.0%
2023	FIELD 813	🌟 Silver	100.0%	75.6%	56.0%
