The Farm Sustainability Assessment (FSA) was created by the Sustainable Agriculture Initiative (SAI) Platform and represents a global food and beverage industry multi-purpose tool to assess, communicate, and improve on-farm sustainability. The FSA was benchmarked to CASP to help translate relevant almond practices to this broader international framework.

The SAI-FSA report scoring is based on responses to 155 CASP practices across all 9 modules along with recognition of federal and California regulatory requirements that align with 112 FSA questions. There are three levels of FSA questions: 'Essential', 'Basic' and 'Advanced'. The 'Essential' questions are about decent citizenship, legal compliance, and minimum expectations for environmental stewardship. The next level - 'Basic' questions - identifies the fundamental elements of sustainable farming. Finally, the 'Advanced' questions address the most progressive sustainable farming practices and continuous improvement initiatives.

This report shows the overall score and the percentage of questions covered in each category. A more detailed report is available upon request by emailing CASP@sureharvest.com. The detailed report shows all 112 FSA questions and how the 155 CASP questions along with California and federal regulations are used to evaluate the FSA.

Performance is based on percentages for Essential, Basic and Advanced FSA questions.

	Essential	Basic	Advanced
Gold	100%	100%	75%
Silver	100%	80%	50%
