The PDF shows how to apply, and the specific Bee Health & Pollination questions used to evaluate Bee Friendly Farming eligibility.

BFF #1 is automatically calculated in CASP depending on presence of cover crop in your orchard. However, permanent vegetation and/or cover crop grown next to your orchard might also qualify if they are greater than 3% of your land size. If your farm meets all other BFF criteria AND you think you may still qualify for BFF #1, please contact Miles Dakin at Pollinator Partnership (miles@pollinator.org) to help determine your certification eligibility.

However, permanent vegetation and/or cover crop grown next to your orchard might also qualify if they are greater than 3% of your land size. If your farm meets all other BFF criteria AND you think you may still qualify for BFF #1, please contact Miles Dakin at Pollinator Partnership (miles@pollinator.org) to help determine your certification eligibility.

Here are the three CASP questions from the Bee Health and Pollination Module.

47. Cover crop (resident ground cover or planted) was intentionally grown between orchard rows.

48. The ground cover was a planted cover crop.

49. The cover crop was recommended for providing forage to pollinators (e.g., mustards, clovers, vetch and/or wildflowers).
