Creating Healthy Habitat for the Rusty-patched Bumblebee	In 2017 the Rusty-Patched Bumblebee became the first bumblebee to be listed as federally endangered. Discover the life history of this important pollinator species, and learn about recovery efforts that are underway in Illinois. Presenter Fayette Aurelia Nichols is active in the restoration of habitat for the Rusty-patched Bumblebee and will share her extensive knowledge of the bee's habitat requirements, challenges in management of natural areas for this species, and how to recognize potential habitat for species recovery. After a presentation indoors, we'll head out into the prairie to find native pollinators. We'll observe the differences between the European honeybee and several species of native bumblebees. The best way to learn is by doing -- and in this class, you'll do both! The Forest Preserve District's Natural Resources team will provide an introduction to monitoring local bee populations via photography. After instruction in general bee identification and monitoring protocol, we'll go out into the prairie to get data. You'll be assigned a pre-determined monitoring spot for photographing the bees. You can use the camera on your phone, a digital SLR, or any "point-and-shoot" camera. The District ecologist will then download all the data collected. This "Bee Blitz" will provide baseline data that will help guide future management decisions.	6/17/2018	1:00 PM	Creek Bend Nature Center, LeRoy Oakes Forest Preserve, 37W700 Dean St.	St. Charles	IL	60175	<a href="mailto:programs@kaneforest.com">programs@kaneforest.com</a> 630-444-3190
